- JavaScript / TypeScript
- React / Next.js
- PixiJS
- Redux
- Material UI / Styled Components
- Node.js / Express
- Mongo DB
- GIT / Webpack / Vite
- Jest / React Testing Library
- Socket.IO

EDUCATION

University WSB Merito

Degree: Bachelor of Information Technology – Frontend Faculty

Years Attended: October 2022 – Present

SUMMARY

I'm a Frontend Developer with 2.5 years of experience, mainly working with React and Next.js. I enjoy building fast applications with a strong focus on UI and UX, whether in a team or as a freelancer. I have experience working closely with designers, backend developers, and product managers, usually organizing tasks through Jira. I value clear communication and always try to make sure that the technical side supports the business goals.

WORK EXPERIENCE

March 2024 - May 2025

Customer: Growe / full time
Domain: Finance, iGaming
Team Size: 6 Dev, 1 Team Lead, 1 QA

FRONT-END ENGINEER

Responsibilities:

- Developed and maintained high-performance multi-page applications and websites using Next.js, ensuring accessibility and responsiveness across devices.
- Integrated REST APIs and backend services; handled data flows, user input, form validation, and business logic. Front-End Issue Resolution: Identify, debug, and resolve front-end anomalies to maintain seamless functionality and user engagement.
- Third-Party Library Integration: Manage the incorporation of external libraries, ensuring their configurations align with project requirements and maintain application stability.
- Technological Advancements: Stay abreast of emerging technologies and best practices, facilitating timely updates and enhancements to existing systems.
- A/B Testing and Experimentation: Implement and manage A/B testing strategies using GrowthBook, integrating feature flags and experiments within React and Next.js applications to optimize user engagement and conversion rates.

Tools and Technlogies:

- Jira
- JavaScript/TypeSctipt
- React
- Next.js
- PixiJS
- A/B testing
- Slack
- CSS/SCSS
- Gitlab

Freelance Frontend Developer

- Developed a full-stack e-commerce platform for ordering car parts, using Next.js for server-side rendering and Express (Node.js) for backend logic.
- Implemented dynamic product filtering, shopping cart, and step-by-step checkout with order tracking.
- Integrated a Telegram bot for employer notifications and real-time order status updates.
- Built a custom CRM system to manage customer data, order history, and payment status.
- Developed backend logic for form validation, user authentication, and secure order processing.
- Connected to external APIs for real-time pricing, availability, and logistics updates.
- Ensured SEO optimization and fast performance through SSR and caching strategies.
